

Evaluation criteria

IMPLEMENTATION (40%)

Architecture & Design (10%)

Score Description

- 5 Exceptional architecture with clear separation of concerns, well-designed interfaces between components
- 4 Well-structured architecture with appropriate component separation
- 3 Adequate architecture with basic component separation
- 2 Poor architecture with minimal component separation
- 1 Inadequate architecture with no clear component separation

Data Modeling (10%)

Score Description

- 5 Sophisticated data model with properly implemented fact/dimension tables, SCD implementation
- 4 Solid data model with fact/dimension tables and SCD implementation
- 3 Basic data model with fact/dimension tables
- 2 Flawed data model with poor table design
- 1 Inadequate data model

Processing Logic (10%)

Score Description

- 5 Advanced processing logic handling complex transformations, late data, and implementing best practices
- 4 Solid processing logic with proper transformations and some handling of edge cases
- 3 Basic processing logic with simple transformations
- 2 Limited processing logic with flawed transformations
- 1 Inadequate processing logic

Quality & Reliability (10%)

Score Description

- 5 Comprehensive data quality checks, error handling, and monitoring
- 4 Good data quality checks and error handling
- 3 Basic data quality checks
- 2 Minimal data quality checks
- 0 No data quality implementation

DOCUMENTATION & PRESENTATION (60%)

Technical Documentation (30%)

Score Description

- 5 Exceptional documentation with clear instructions, architecture diagrams, and code documentation - Without AI over-explanation
- 4 Complete documentation with good instructions and diagrams - Without AI over-explanation
- 2 Adequate documentation with basic instructions - Without AI over-explanation
- 0 Insufficient documentation

Presentation & Demo (30%)

Score Description

- 5 Outstanding presentation clearly explaining all aspects of the solution with excellent demo and easy to reproduce on my local machine
- 4 Strong presentation covering most aspects with good demo and easy to reproduce on my local machine
- 3 Adequate presentation with effective demo and easy to reproduce on my local machine
- 2 Weak presentation with effective demo and easy to reproduce on my local machine
- 1 Poor presentation with effective demo and easy to reproduce on my local machine
- 1 Difficult to reproduce on my local machine
- 0 Demo doesn't work
- 0 Demo isn't fully shown in the video end-to-end without cuts

Bonus Features (20%)

Score Description

- 5 Implementation of both Great Expectations and DataHub with excellent integration
- 3-4 Implementation of either Great Expectations or DataHub
- 1-2 Attempts at bonus features with limited success
- 0 No bonus features implemented

Correct workflow

- (- 2) Working directly on main/master
- (- 5) Incorrect files structure
- (- 10) Commits are not distributed throughout time, instead there are fewer commits and each commit has a large amount of changes

If you're going to use tools you're not supposed to (Hive, HDFS, etc...), your entire submission can be disqualified.

If spark applications will be running on any other containers that are not of processing, your entire submission can be disqualified.
